Alex Example

Backend Engineer — Zurich, Switzerland
alex@example.test · +41 44 000 00 00 — example.test · code.example.test/alex

Profile

Backend engineer with five years of Python APIs and asynchronous workers in production. I like services that are measured before they are tuned, deployed in small reversible steps and documented well enough that colleagues can run them on call.

Experience

Backend Engineer — Example Cloud, Zurich — Jan 2021 – present

- Built the Python APIs and asynchronous workers of a developer platform that internal teams use to provision and monitor their services.
- Added request tracing to the core endpoints and revised the slowest ones, reducing API p95 latency by 20%.
- Moved long-running jobs from request handlers to a queue of asynchronous workers with retries and idempotent steps.
- Documented the rollout and helped four colleagues operate the services, including a shared on-call rotation.

Selected project

Reliable deployment workflow — 2023

- Designed a typed deployment workflow with health checks and automatic rollback, in TypeScript on Docker and Linux.
- Reduced the manual deployment procedure from nine steps to three and made release status visible to the whole team.

Education

MSc Computer Science — Example University — 2018 – 2020
Thesis on fault-tolerant job queues for web services.

Also

Example community award (2024) for documenting an open-source deployment workflow. Coauthor of a workshop note on API reliability (2024).

Skills and languages

Python, SQL, PostgreSQL, REST APIs, asynchronous workers, TypeScript, Docker, Linux, tracing and metrics. Italian (native), English (fluent, C1).
